Data Collection and Estimation Techniques Data is collected from companies in the managed funds market covering funds under management, gross inflows, gross outflows, net inflows unit prices and investment return rates. Gross Inflows represents an indication of new business sales. Data is thoroughly checked and queries are raised with data providers if data is significantly different from trends or compared to other companies. Where inflow or outflow data is unavailable, we make estimates based on market behaviour from similar investments in compatible markets. When companies provide actual inflow and outflow data these replace estimates. This estimation procedure, coupled with our rigorous direct data collection, enables us to prepare high quality, reasonable and comprehensive data for every Manager.
